SUMMARY

QA engineer with two years of manual and API testing at Conspire Agency, working remotely with a team in the US. I'm now moving into test automation full time. What I care about most is whether the data and the business logic are right, for example that a filter returns only the correct records or that a payment charges the right amount. I mostly work with Playwright and TypeScript, and also with Python and pytest. I use AI tools like Claude every day. On the side I build web apps for clients, which gave me a good picture of how the backend and frontend work together.

SKILLS

Testing	API testing, negative testing, regression, smoke and exploratory testing, test case design, boundary values and equivalence partitioning, bug reporting
Automation	Playwright, TypeScript, Page Object Model, fixtures, API tests
Python	Python, pytest (working knowledge)
CI/CD	Git, GitHub, GitHub Actions
API and data	REST, JSON, Postman, SQL, PostgreSQL
Tools	Chrome DevTools, Jira, Trello, Claude
Web	Next.js, React, Tailwind CSS, Prisma, Vercel

EXPERIENCE

QA Engineer · Conspire Agency

Apr 2023 to Mar 2025

Manual and API testing · Remote, client in the US · Agile/Scrum

- Did smoke, regression and exploratory testing on several web apps, desktop and mobile, before each release.
- Tested REST APIs in Postman separately from the UI: business logic, raw JSON payloads, auth and status codes.
- Found a checkout bug in an online store: the coupon discount showed on screen, but the customer was charged full price. I caught it by comparing the total in the UI with the amount sent to payment.
- Wrote bug reports in Jira and Trello with clear steps, environment details and network data from DevTools.
- Wrote test cases using boundary values, equivalence partitioning and negative cases, and brought up edge cases with developers in sprint planning.

Web Developer · mehiccdev, own studio

Since Jan 2025

Mostar · web applications for local and regional clients · mehiccdev.com

- Build web apps for clients with Next.js, TypeScript, Prisma and PostgreSQL, including a car rental booking system in two languages.
- Test every app before handover and deploy on Vercel.
- Run the business side myself: finding new clients, tracking them in a spreadsheet, planning my time and estimating how long each task will take.
- Talk to clients directly, in Bosnian and English, and keep them updated while the project is running.
- Automate repetitive work wherever I can, with a person still checking the result.

EDUCATION

BSc, Software Engineering

Expected 2028

Faculty of Information Technologies, University
"Džemal Bijedić", Mostar
